

INTRODUCTION

Hello. I'm Frank Doherty, Founder and President of Aquatox Research.

Aquatox was formed in 1992 as a spinoff from a central NY [consulting firm](#). Over the past thirty years we have conducted thousands of projects for nearly 400 clients across [NY](#) and the [United States](#). These projects have included both freshwater and saltwater fish and invertebrates, freshwater sediment invertebrates, luminescent bacteria, rapid biochemical assays, algae and literature reviews. In response to client needs, we have pared our services to four primary areas, WETT and chemical testing, Microtox and literature reviews. Our website has individual sections devoted to each of these areas.

Thank you for visiting our newly designed site. Please feel free to contact us with any questions you may have.
