

MICROTOX-A LUMINESCENT BACTERIAL RAPID ASSAY

Hello. I'm Frank Doherty, Founder and President of Aquatox Research.

We have been providing **Microtox** testing services here at Aquatox since 1996. Even though it isn't a regulatorily approved test method, we invested in the technology to offer our clients a low-cost rapid assay for screening applications. We've completed tens of thousands of tests for over a hundred clients in the past 25 years. Our projects have included safety testing of cosmetics products, storm water testing, sediment testing and operational efficiencies of wastewater treatment plants. One memorable project involved testing treatment plant influent samples collected every few hours overnight. Data from these tests documented the presence of a midnight dumper illegally discharging waste to the treatment plant.
