

TOXPROFILES-A LITERATURE BASED INFORMATION SERVICE

Hello. I'm Frank Doherty, Founder and President of Aquatox Research.

We began offering literature based services here at Aquatox in the late 1990s. We named the service [ToxProfiles](#). Literature searches are conducted on the basis of a Chemical Abstracts Services registry number. If data are located, we attempt to obtain a copy of the original article in which it was published and assess the usefulness of the information. Our goal is to locate published aquatic toxicity info for clients as an alternative to lab testing of chemical products. We have posted a discussion relating to ToxProfiles on our newly designed website.

Thank you for visiting. Please feel free to contact us with any questions you may have.
